this is course project pdf illustrating about project details

BUSSINESS

Introduction

This Web App is built for abosjewellers to sell and represent their bussiness online ,it would definatly help them by selling online over a web-site where user can directly purchase through procedure of simple steps

this bussiness is all about jewellery shoping online and it is a multi-national brand works for delivering the jewel product with varity of ranges

commonly nattiyan it is the india's most selling product gaining popularity over many countries, it came from indian tradition.

abos is delivering this product over the world through this website

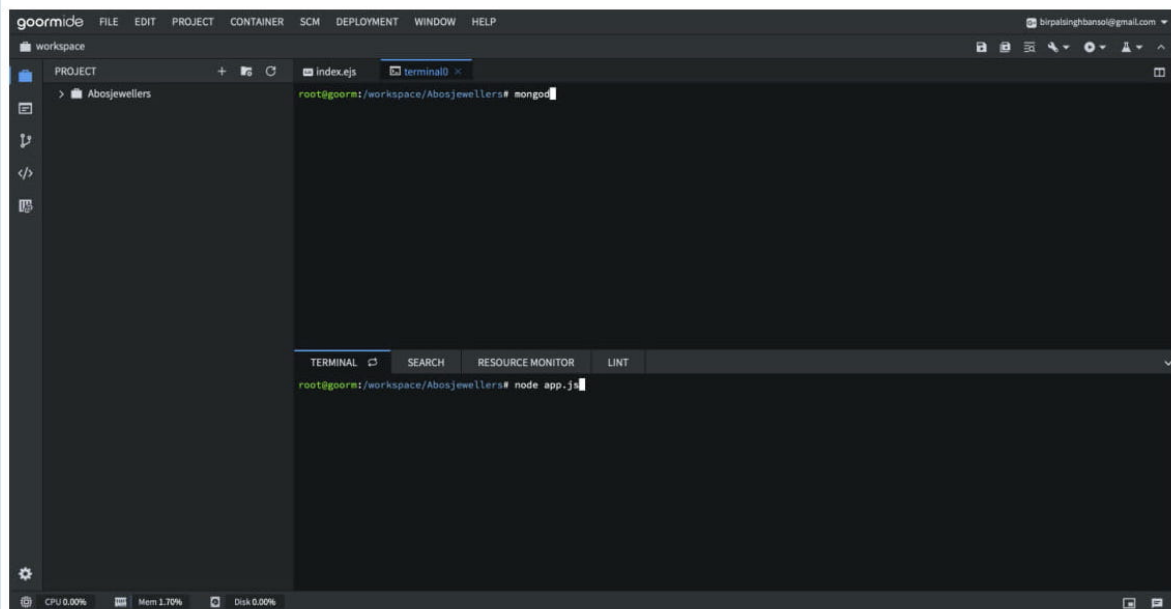

the Abos company launched abosjewellers in an attempt to earn its own foreign exchange, focused largely on exports. In the early 1990s, India's exchange issue was fixed, and the Titan Company chose to focus the brand on the Indian market. The first production plant launched in August 1992, and abos's first store opened in 1996. it was the first jewellery retail brand in India.

Instruction to run GroomIDE Project

there are few simple steps to run GroomIDE project
turning database and then node app

Instruction to run GroomIDE Project

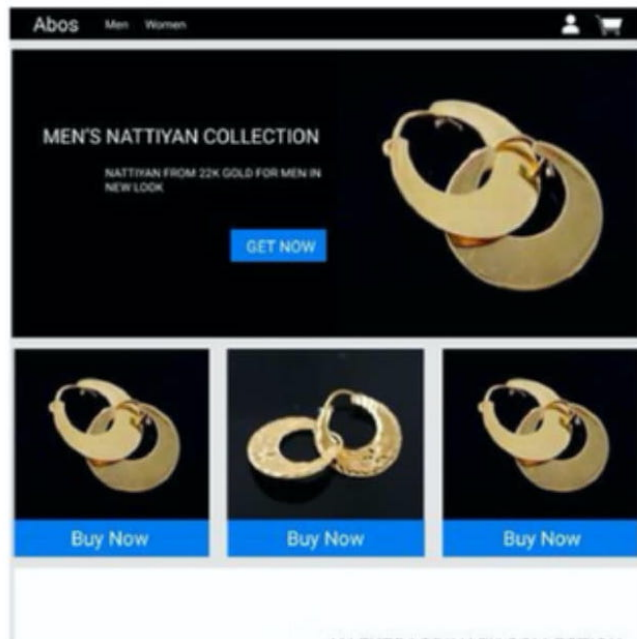

1. Open the new terminal window to turn the database server ON.
2. then type MONGOD to run database execution.
3. In bottom terminal run NODE APP.JS to run node app.

4. then opening the project dropdown menu will take to the RUNNING URL and PORT.
5. Proceed with link given there to open the app in browser.

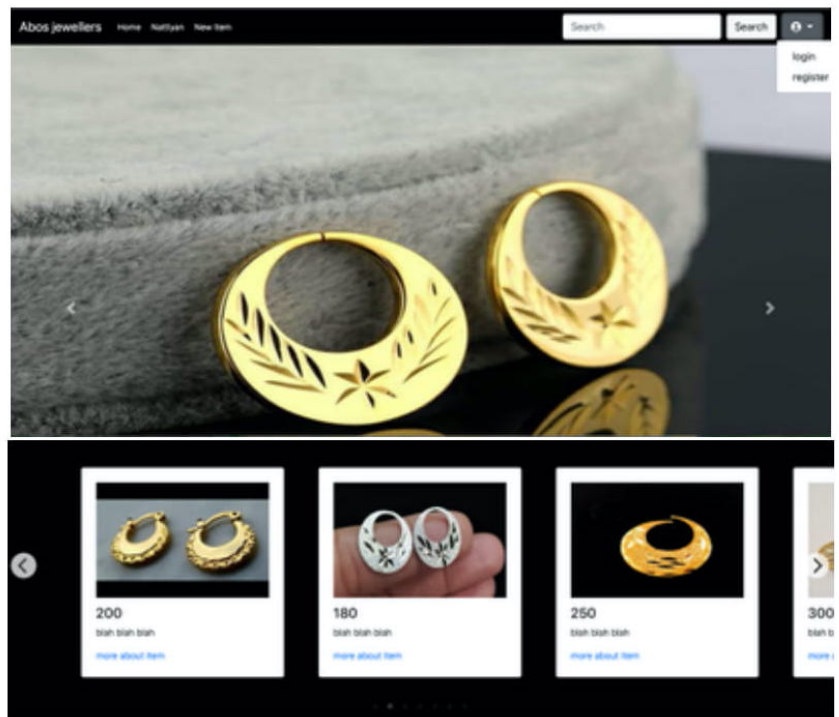

Comparison with Figma structure

website structure

it was the figma structure designed for wireframing the the design of web app app such as top navbar profile icon cart icon item preview in a card with a buy now button menu bar buttons

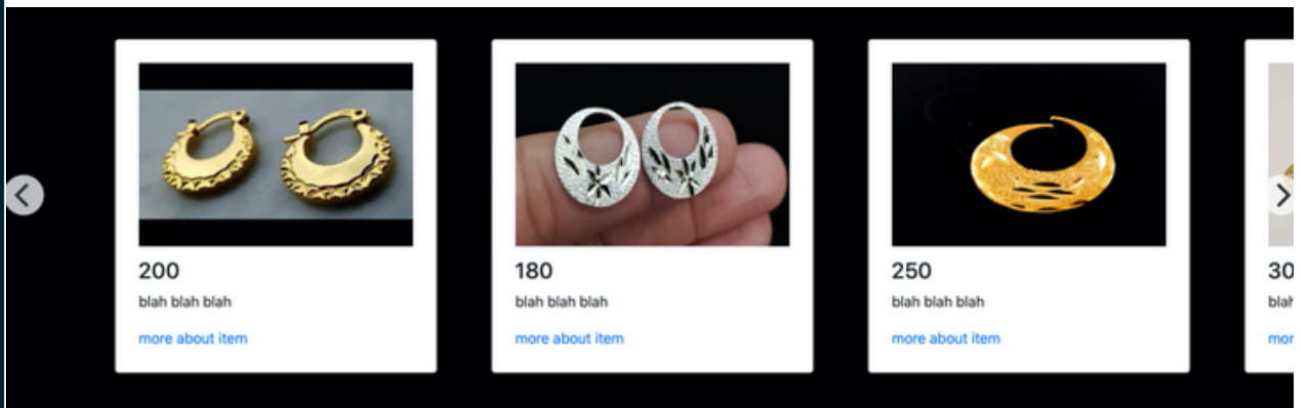

this is current structure of web app with navbar along with nav items and a carousel. then, the items in cards with slider to preview many item at same time. Moreover another thing is added that is search bar and account register and login dropdown.

Feature Explanation

items card with slider

an simple slider with cards of item helps the customers to go through all the available item in particular type to choose one of that which they like and a button under every item takes the user to show page for previewing the selected item.

login and signup page

there are two form to login and signup user with two credentials username and passwords to access cart and profile page

--

--

in background it takes the user inputs to the mongoose database and saves them to login back and also debugging the problem of same inputs for security

A screenshot of a 'sign up' form. It has a title 'sign up', a 'username' input field, a 'password' input field, and a 'register now' button.

adding a new item

as this is admin side app such that it allows the user to control over adding new item, editing item and deleting the item

--

--

in the background it takes all item s=details through form and saves all inputs in data to render the inputs on show page and all items page

Item Name

description

Item image

price of items

show page with comments

a simple show page with edit and delete buttons alongside with comments form which allows user to give feedback over product

--

--

in the background it takes data from seeded data with all item to show only linked comments on the show page
